

Outline

- ◆ Drivers of supply chain performance
- ◆ A framework for structuring drivers
- ◆ Facilities
- ◆ Inventory
- ◆ Transportation
- ◆ Information
- ◆ Sourcing
- ◆ Pricing
- ◆ Obstacles to achieving fit

Drivers of Supply Chain Performance

- ◆ Facilities
 - places where inventory is stored, assembled, or fabricated
 - production sites and storage sites
- ◆ Inventory
 - raw materials, WIP, finished goods within a supply chain
 - inventory policies
- ◆ Transportation
 - moving inventory from point to point in a supply chain
 - combinations of transportation modes and routes
- ◆ Information
 - data and analysis regarding inventory, transportation, facilities throughout the supply chain
 - potentially the biggest driver of supply chain performance
- ◆ Sourcing
 - functions a firm performs and functions that are outsourced
- ◆ Pricing
 - Price associated with goods and services provided by a firm to the supply chain

A Framework for Structuring Drivers

Facilities

◆ Role in the supply chain

- Inventory = what
- Transportation = how
- Facilities = the “where” of the supply chain
- manufacturing or storage (warehouses)

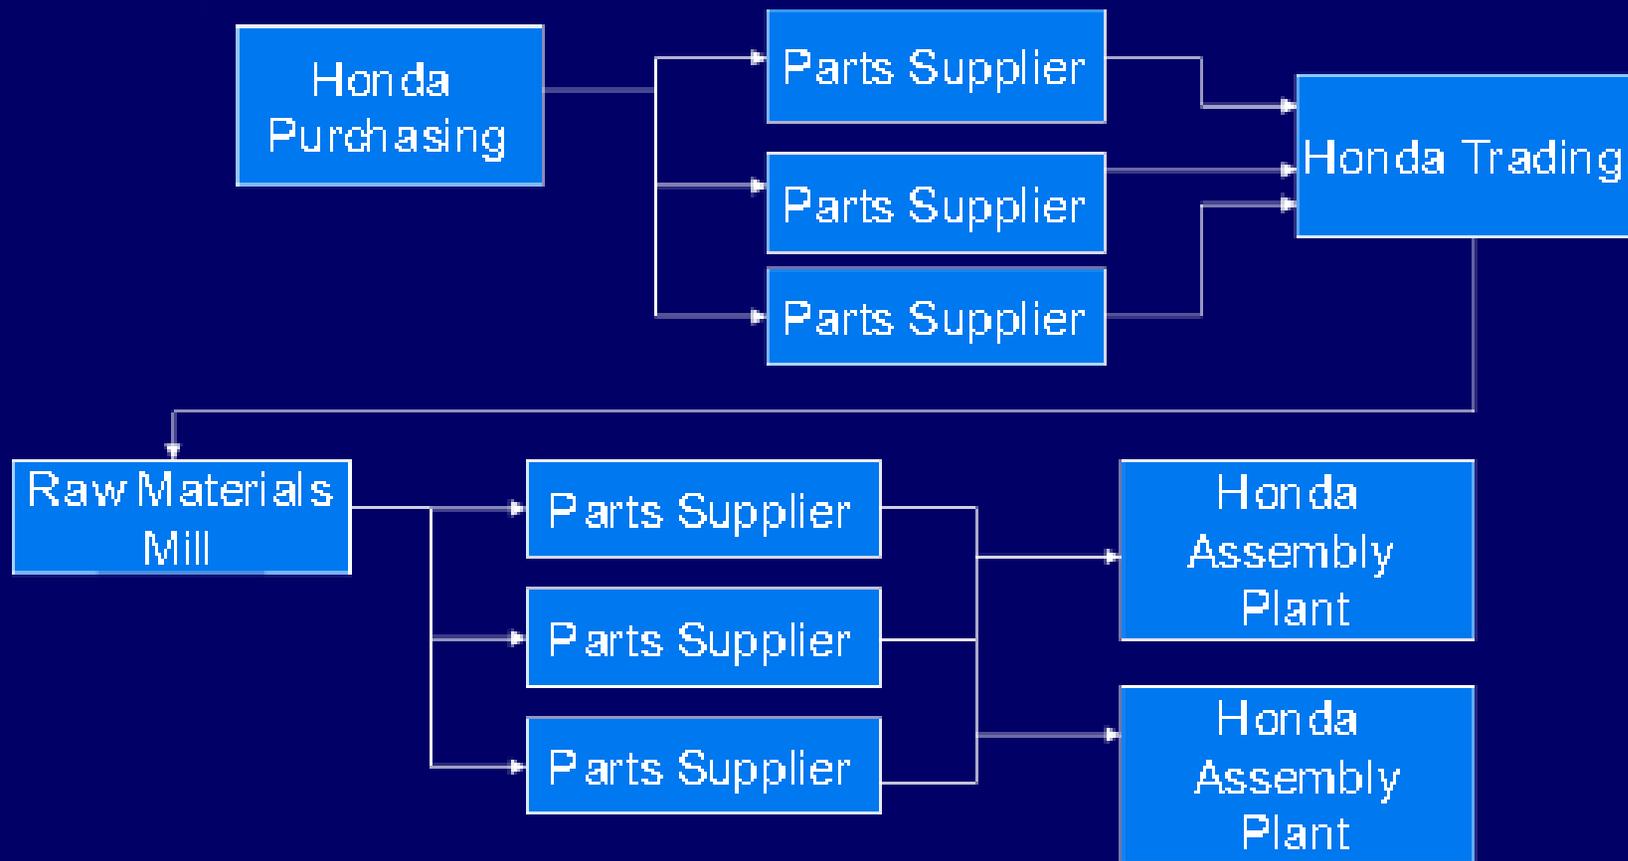

◆ Role in the competitive strategy

- economies of scale (efficiency priority)
 - » One location / centralized
- larger number of smaller facilities (responsiveness priority)
 - » Close to customer

◆ Example 3.1: Toyota and Honda

◆ Components of facilities decisions

Example Honda Supply Chain

Components of Facilities Decisions

- ◆ Location
 - centralization (efficiency) vs. decentralization (responsiveness)
 - other factors to consider (e.g., proximity to customers)
- ◆ Capacity (flexibility versus efficiency)
- ◆ Manufacturing methodology (product focused versus process focused)
- ◆ Warehousing methodology (SKU storage, job lot storage, cross-docking)
- ◆ Overall trade-off: Responsiveness versus efficiency

Inventory

- ◆ Role in the supply chain
- ◆ Role in the competitive strategy
- ◆ Components of inventory decisions

Inventory: Role in the Supply Chain

- ◆ Inventory exists because of a mismatch between supply and demand
- ◆ Source of cost and influence on responsiveness
- ◆ Impact on
 - material flow time: time elapsed between when material enters the supply chain to when it exits the supply chain
 - throughput
 - » rate at which sales to end consumers occur
 - » $I = DT$ (Little's Law)
 - » I = inventory; D = throughput; T = flow time
 - » Example
 - » Inventory and throughput are “synonymous” in a supply chain

Inventory: Role in Competitive Strategy

- ◆ If responsiveness is a strategic competitive priority, a firm can locate larger amounts of inventory closer to customers
- ◆ If cost is more important, inventory can be reduced to make the firm more efficient
- ◆ Trade-off
- ◆ Example 3.2 – Nordstrom

Components of Inventory Decisions

◆ Cycle inventory

- Average amount of inventory used to satisfy demand between shipments
- Depends on lot size

◆ Safety inventory

- inventory held in case demand exceeds expectations
- costs of carrying too much inventory versus cost of losing sales

◆ Seasonal inventory

- inventory built up to counter predictable variability in demand
- cost of carrying additional inventory versus cost of flexible production

◆ Overall trade-off: Responsiveness versus efficiency

- more inventory: greater responsiveness but greater cost
- less inventory: lower cost but lower responsiveness

Transportation

- ◆ Role in the supply chain
- ◆ Role in the competitive strategy
- ◆ Components of transportation decisions

Transportation: Role in the Supply Chain

- ◆ Moves the product between stages in the supply chain
- ◆ Impact on responsiveness and efficiency
- ◆ Faster transportation allows greater responsiveness but lower efficiency
- ◆ Also affects inventory and facilities

Transportation: Role in the Competitive Strategy

- ◆ If responsiveness is a strategic competitive priority, then faster transportation modes can provide greater responsiveness to customers who are willing to pay for it
- ◆ Can also use slower transportation modes for customers whose priority is price (cost)
- ◆ Can also consider both inventory and transportation to find the right balance
- ◆ Example 3.3: Blue Nile

Components of Transportation Decisions

- ◆ Mode of transportation:
 - air, truck, rail, ship, pipeline, electronic transportation
 - vary in cost, speed, size of shipment, flexibility
- ◆ Route and network selection
 - route: path along which a product is shipped
 - network: collection of locations and routes
- ◆ In-house or outsource
- ◆ Overall trade-off: Responsiveness versus efficiency

Information

- ◆ Role in the supply chain
- ◆ Role in the competitive strategy
- ◆ Components of information decisions

Information: Role in the Supply Chain

- ◆ The connection between the various stages in the supply chain – allows coordination between stages
- ◆ Crucial to daily operation of each stage in a supply chain – e.g., production scheduling, inventory levels

Information: Role in the Competitive Strategy

- ◆ Allows supply chain to become more efficient and more responsive at the same time (reduces the need for a trade-off)
- ◆ Information technology
- ◆ What information is most valuable?
- ◆ Example 3.4: Andersen Windows
- ◆ Example 3.5: Sunsweet Growers

Components of Information Decisions

- ◆ Push (MRP) versus pull (demand information transmitted quickly throughout the supply chain)
- ◆ Coordination and information sharing
- ◆ Forecasting and aggregate planning
- ◆ Enabling technologies
 - EDI
 - Internet
 - ERP systems
 - Supply Chain Management software
- ◆ Overall trade-off: Responsiveness versus efficiency

Sourcing

- ◆ Role in the supply chain
- ◆ Role in the competitive strategy
- ◆ Components of sourcing decisions

Sourcing: Role in the Supply Chain

- ◆ Set of business processes required to purchase goods and services in a supply chain
- ◆ Supplier selection, single vs. multiple suppliers, contract negotiation

Sourcing: Role in the Competitive Strategy

- ◆ Sourcing decisions are crucial because they affect the level of efficiency and responsiveness in a supply chain
- ◆ In-house vs. outsource decisions- improving efficiency and responsiveness
- ◆ Example 3.6: Cisco

Components of Sourcing Decisions

- ◆ In-house versus outsource decisions
- ◆ Supplier evaluation and selection
- ◆ Procurement process
- ◆ Overall trade-off: Increase the supply chain profits

Pricing

- ◆ Role in the supply chain
- ◆ Role in the competitive strategy
- ◆ Components of pricing decisions

Pricing: Role in the Supply Chain

- ◆ Pricing determines the amount to charge customers in a supply chain
- ◆ Pricing strategies can be used to match demand and supply

Sourcing: Role in the Competitive Strategy

- ◆ Firms can utilize optimal pricing strategies to improve efficiency and responsiveness
- ◆ Low price and low product availability; vary prices by response times
- ◆ Example 3.7: Amazon.com

Components of Pricing Decisions

- ◆ Pricing and economies of scale
- ◆ Everyday low pricing versus high-low pricing
- ◆ Fixed price versus menu pricing
- ◆ Overall trade-off: Increase the firm profits

Obstacles to Achieving Strategic Fit

- ◆ Increasing variety of products
- ◆ Decreasing product life cycles
- ◆ Increasingly demanding customers
- ◆ Fragmentation of supply chain ownership
- ◆ Globalization
- ◆ Difficulty executing new strategies

Summary

- ◆ What are the major drivers of supply chain performance?
- ◆ What is the role of each driver in creating strategic fit between supply chain strategy and competitive strategy (or between implied demand uncertainty and supply chain responsiveness)?
- ◆ What are the major obstacles to achieving strategic fit?
- ◆ In the remainder of the course, we will learn how to make decisions with respect to these drivers in order to achieve strategic fit and surmount these obstacles
